

Qualitative Face Fit Testing Kit Training

Our experienced and Fit2Fit Accredited Respiratory Technicians will be carrying out face fit training courses in Jersey from November onwards.

On the UK mainland it's a legal requirement for all employees who wear tight fitting RPE, to be face fit tested.

In order that companies can manage this requirement in-house, we can provide training using the qualitative face fit testing kit.

All delegates will receive:

- An introduction to face fit testing
- Knowledge of the legislation and guidance
- Information on selection and maintenance of RPE
- Guidance on how to set up the testing equipment, fit test protocols and pass levels
- Practical experience of using the qualitative testing equipment
- Planning and implementing a fit testing programme
- Information on troubleshooting and test fails
- Certification of attendance

Date: November onwards

Time: Varied to suit client requirements

Venue: Testing carried out at company location

Cost: Upon request and payment upon booking required

For all enquiries contact:
